

# Smart Playlist creation .. Scale it Up!

**Is K-Means a good method for  
creating playlists?**

**YES**, to an extent

# Is K-Means a good method for creating playlists?

✓ K-Means can create cohesive playlists by grouping songs with similar numerical audio characteristics

✗ But it has limitations when it comes to musical nuance and user taste.

# Is K-Means a good method for creating playlists?

## Pros

- ✓ Easy to Implement.
- ✓ Scalable
- ✓ Fast Convergence .

## Cons

- ✗ Needs Predefined **K**
- ✗ Sensitive to Initialization
- ✗ Doesn't Handle Non-Spherical Shapes Well
- ✗ Sensitive to Outliers

# What is the right amount of playlists?

## Inputs

- List of 5235 songs
- 50 -250 songs/playlist
- Numerical features

## Preprocessing

- Data scaling
- Principal Component Analysis (PCA)
- Inertia & silhouette scores
- Knee Locator

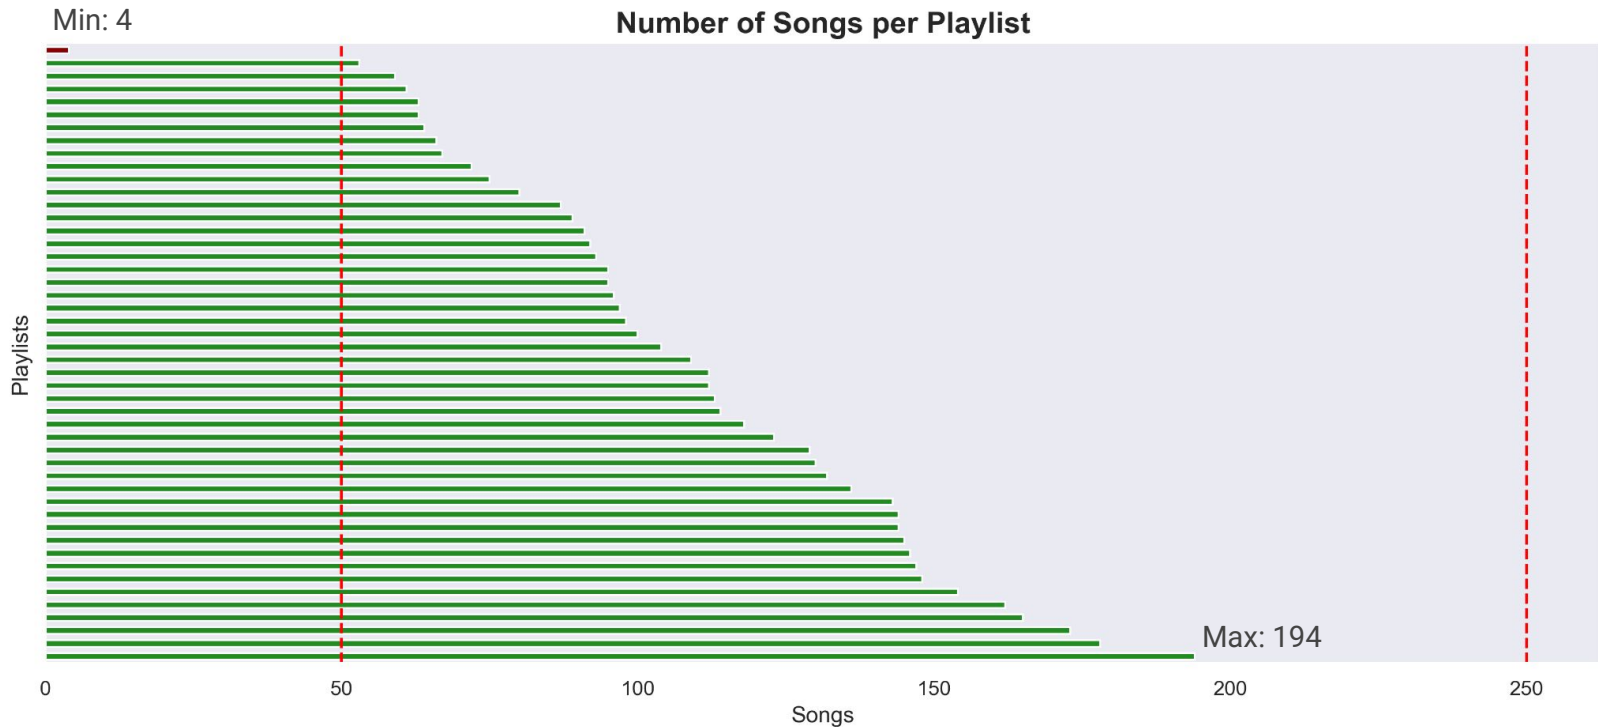

## Final number of playlists

48

# What is the right amount of playlists?

# challenges

Difficulty Finding the "Perfect"  
Number of Clusters ( $k$ )

Some Playlist Sizes Not  
Within Desired Range

No Overlapping Songs  
(Songs Only in One Cluster)

51	 <b>Engine 54</b> The Ethiopians	Let's Do Rocksteady: The Story Of Rocksteady 1966-68	19 minutes ago	2:37
52	 <b>This Is Reggae Music</b> Zap Pow	Reggae Chartbusters, Vol. 4	18 minutes ago	3:01

Are we capturing the **human** idea of “**similarity**” with spotify’s features?

Generally, we get **fairly cohesive** playlists, but sometimes we also encounter **really bad** matches.

## What kind of **data** might help us create **better playlists**?

To detect **genre** or other **human** ideas of similarity, we could obtain labeled data from existing **human**-made Spotify playlists

- By scoring song pairs based on how often they co-occur—especially as neighbors—we can define a **playlist cohesion score** for newly generated playlists.
- This can serve as a cost function for **supervised ML**.

# Next Steps

- **Exploring Other Algorithms:** HDBSCAN
- Adding **selection** layers to throw out misfits:
  - Chat-GPT can judge playlists quite efficiently
  - Some **humans**, too
- **Supervised Learning for Genres**
  - Train a model using **labeled data**

# Thank You for Your attention!
